Factory reset hp lg android

Is your Samsung smartwatch having performance issues? Or do you want to sell it soon? Factory reset may be in order. All Samsung wearables use Tizen, Samsung's own operating system. So, whether you're the latest Galaxy Watch Active 2 or an older watch like the Samsung Gear S3, the factory reset process will be pretty much the same. We will help you with a step-by-step guide. Here's how to factory reset your Samsung watch. How to support your Samsung Smartwatch Before you start, you should consider supporting your data. Smartwatches may keep data just as important as our phones, but backups save you without any problems from having to personalize your settings throughout again. This process is relatively painless on any Samsung wearable. Here's how to support your smartwatch: Unlock galaxy wearable app on your phone. Scroll down to find the account and backup section. hit it . Make sure the correct Samsung account is connected, then tap and restore back up, followed by restoring back up data. Choose which settings and apps you want to back off from the list and turn auto off or off again. Press the backup button at the bottom of the screen. It takes a few seconds when the process is complete, you can press Done and continue with your factory reset. However you should note that images and music stored on your watch will not be supported. Make sure you copy them elsewhere because the factory reset will erase them along with the rest of the data on your watch. How to factory reset your Samsung watch reset your Samsung smartwatch is quite simple. There are three ways you can go about it: reset the factory directly through your watch, using the Galaxy Wearable app on your phone, or reset hard through reboot mode. Here's how each method works: Smartwatch Factory reset From home your smartwatch, swipe left twice to get to the app drawer. Tap the Settings icon and scroll down until you find the general. hit it . Scroll down to find and select reset. You will be asked to confirm your choice. Tap tick to reset your Samsung smartwatch factory. Galaxy Wearable Factory app reset the Galaxy Wearable app on your smartphone. Make sure your watch is connected via Bluetooth. Tap the Connect button if it's not and make sure Bluetooth is enabled on your phone. Once connected, scroll down to find the public sector. hit it . Select Reset from the options displayed. Tap Reset. Factory manually reset If your smartwatch having performance issues, you may be able to connect it to your phone or reset it through its settings. In this case, you have to do a hard manual reset. Turn off your Samsung smartwatch by pressing and holding the power button (usually on The bottom right of the face is the watch). If it doesn't respond, hold the button until the clock restarts. While restarting it, press the power button several times in quick successive. This restart mode will cause triggers to choose appear. Select Recovery by scrolling through options with home button. The device will reboot once again and perform a factory reset, erasing all your data. There you make it - it's all the ways you can use to factory reset your Samsung watch. Did we help you solve your problems? Let us know in the comments below. You just received your shiny new flagship from the smartphone and now you're ready to put the old one up for sale on eBay, or Craigslist, or Swappa. The secondary market is alive and well with over hundreds of thousands of devices for sale. You have taken really good care of your older Android device and are sure to get it at a huge price from an avid buyer. All you have to do is do a factory reset and you're good to go, right? maybe not . AVAST, which is an anti-virus software that offers free software as well as paid services for consumers and businesses alike, took to the internet and purchased 20 used Android phones in order to see how much, if any, personal data was still on the devices after doing a clean-up factory. The results were stunning to say the least. With the help of some off-the-shelf digital forensic software (such as FTK Imager), AVAST was able to cover the following: More than 40,000 photos stored More more than 1,500 family photos of Children More more than 750 photos Of the women with varying degrees of clothing in (or off) more than 250 selfies taken by men doing their best imitation of former Congressman Anthony Weiner Over 1,000 Google searches At least 750 emails and text messages more than 250 contacts names and email addresses Four identity previous owners One completed the loan program What happens then? Press release AVAST to note if any of the devices were, in fact, factory reset or if there were any errors in how the device might reset. We also don't know how old, or what version of the operating system is on the device. We contacted AVAST to see if there were other variables worth paying attention to in their findings. Aside those issues, where is the shortened falling factory reset? Resetting in these cases seems to be more focused on the application layer, and not much more. Avast noted that its anti-theft app, which is free on Google Play, has the ability to delete and rewrite these personal files along with a host of other features. That show, it's a show! Anti-theft, and dozens of others may be worth considering before placing their former device, a real digital life wallet for sale. Update: We sent a few questions to AVAST to get some idea of what they were working with when started on this small project. We heard from Jaromir Hofejši malware analyst, and Thomas Zeman, mobile product manager at AVAST. Q: Was there any indication that each device was properly factory reset? A: The majority of phones were factory resets, however there were some that started our virus lab and went through the default setup tutorial. Q: What a version of The system was installed on the device? A: All different versions of Android were present, most phones had Android version 4 (different versions), others had android version 2.3.x called Gingerbread. Q: Was AVAST able to repeat the results? You're gonna wipe a machine again and still find data? A: Yes, we reset the right factory on some phones (in case the owner had not done so) and was still able to find the data. So we were able to repeat our experiments. Q: Aside from the app layer being erased, is there any explanation from AVAST's point of view how and why the factory reset is so ineffective? B: Depends on the implementation of the manufacturer. If the factory reset was correct, nothing would have been recovered. If the implementation is incorrect, we were able to recover some data. As for the 20 AVAST devices purchased on the secondary market in this project, the failure is as: HTC EVO V 4G HTC One X HTC Thunderbolt HTC Sensation 4G Motorola Droid RAZR (4) Motorola ATR! X 4G Samsung Galaxy S2 (2) Samsung Galaxy S3 (3) Samsung Galaxy S4 (2) Samsung Galaxy Stratosphere LG Optimus (2) Based on the answers, where implementation was correct, and nothing was recovered, if nothing else, this serves as a handy reminder to take care in preparation fit your devices before you act part of the way with them. Sources: Avast via CNET Subscribe to our newsletter! There comes a time in every user's life when they have to reset something to their factory default. Maybe the machine is acting and needs a fresh start, you're getting rid of it, or you want a clean slate for other reasons. The good news is that it's incredibly easy to factory reset your Android TV box, regardless of manufacturer. The first thing you want to do is jump to the Settings menu by going to the bottom of the home screen and selecting the cog icon. From there, find and select Storage & rest. This menu is simple, as there are only two choices: Internal Storage and Factory Data Reset. You want the latter, depending on which box you're using, there may be a few options here. For example, Nexus Player will only offer Full reset and Cancel options, where Nvidia Shield also has the option of quick resetting. Choose the one that makes the most sense for your situation — if you're getting rid of the fully programmed box, always do the full reset. Once you have chosen the option, there will be another screen that confirms that you are sure this is what you want to do. Make a good choice (or whatever the confirmation is for your specific box) to get started. Depending on how much storage your device has, this can take quite a while. My 500GB Shield notes that factory reset can take up to two hours. The good news is that you don't have to sit around and watch it — the process is pretty much in autopilot anyway. You can go out there or I can hear it out there. The necessary part of being the responsible owner. Even if you plan on keeping the box, it's always nice to know how to start fresh if things seem to be going to panic. terrified .
